

Front End Developer Test

Todo List

The Task

Based on the attached Sketch files and without using a database, create a todo list app that allows the user to do the following:

- Create a new todo item
- Edit a todo item
- Reorder the todos
- Mark a todo as complete
- Set a due date for each todo

Acceptance Criteria

- The app should remember the user's todos if the browser is closed / refreshed
- The app should work on mobile devices

Feel free to use a HTML and/or JS framework if you think it would help you with the task.
